What is claimed is: 1 2 3 1. A sensor for sensing the presence of a chemical vapor, the 4 sensor adapted for interconnecting to an electrical monitor for measuring a reaction of the sensor to the chemical vapor, the sensor comprising, a positive terminal, the positive terminal being conductive, a negative terminal, the negative terminal being conductive, 8 9 the terminals adapted for interconnection to the electrical 10 monitor, and 11 a film of organic conductive polymer nanofibers extending between the positive and negative terminal for producing a 12 13 change in conductivity between the positive terminal and the 14 negative terminal as monitored by the electrical monitor when 15 the film is exposed to the chemical vapor. 16 17 2. The sensor of claim 1 wherein, 18 the positive terminal and the negative terminal are made of gold. 19 20 21 22 3. The sensor of claim 1 wherein the positive terminal and the 23 negative terminal are made of gold and the conducting polymer is polyaniline, the sensor further comprising, 24 25

a thiol surface layer disposed between the terminals and the film.

4. The sensor of claim 1 wherein, 1 2 the polymer nanofibers are selected from the group 3 consisting of polyaniline nanofibers, polypyrrole nanofib rs, polythiophene nanofibers, polytoluidine nanofibers, polyanisidine nanofibers, polymethylaniline nanofibers, polyethylaniline nanofibers, poly2-alkoxyanilines nanofibers and poly2,5-dialkoxyanilines nanofibers. 8 9 5. The sensor of claim 1 wherein, 10 the polymer nanofibers are polyaniline nanofibers, and 11 the chemical vapor is selected from the group consisting of an acid vapor and a basic vapor. 12 13 14 6. The sensor of claim 1 wherein, 15 the polymer nanofibers have diameters less than 500 nm and 16 lengths less than 10 μm . 17 18 7. The sensor of claim 1 wherein, 19 the polymer nanofibers are polyaniline nanofibers having 20 diameters less than 500 nm and lengths less than 10 µm. 21 22 8. The sensor of claim 1 wherein, 23 the polymer nanofibers are polyaniline nanofibers having distributed diameters of 50 nm. 24 25 26 9. The sensor of claim 1 wherein, 27 the polymer nanofibers are polyaniline nanofibers having distributed diameters of 30 nm.
